

Homework: 2-second Lean Improvements

1. **Before:** My desk was very messy, and I couldn't reach my CPU cable ports easily. This caused wasted **motion** every time I needed to plug or unplug something.

Before

After

After: I rearranged my desk so the cables are now accessible right away, eliminating wasted motion and saving several minutes each time.

2. **Before:** My children's book area was cluttered with random items and books mixed together. It was difficult to find what we needed, creating wasted **time and motion**.

Before

After

After: I sorted baskets by book type (learning, bedtime, coloring). Now books are easy to find, reducing wasted motion and making cleanup faster.

Homework: 2-second Lean Improvements

3. **Before:** I often misplaced my keys around the house, especially on the couch. This caused wasted **motion** searching for them daily.

Before

After

After: I installed a small key holder near the door. Now keys have a home, and I can grab them instantly when leaving.

4. **Before:** My rental storage area was overcrowded, messy, and hard to walk through. I almost couldn't see the floor, causing wasted **motion and space** whenever I needed something.

Before

After

After: I reorganized and labeled some bins. Now I can easily stand, see, and reach what I need without moving multiple items.
